#### Notice

This publication is made up of a combination of extended abstracts and full papers, submitted by the authors without peer review. The papers in this volume should not be cited as primary literature. The Physiology Section of the American Fisheries Society offers this compilation of papers in the interests of information exchange only, and makes no claim as to the validity of the conclusions or recommendations presented in the papers.

For copies of these Symposium Proceedings, or the other 20 Proceedings in the Congress series, contact:

## **CONGRESS ACKNOWLEDGEMENTS**

This Symposium is part of the International Congress on the Biology of Fish, whose main sponsors were Fisheries and Oceans Canada (DFO), and Towson University. The main organizers of the Congress, on behalf of the Physiology and Fish Culture Sections of the American Fisheries Society, were Don MacKinlay of DFO (overall chair, program and proceedings), Karin Howard (registration and accommodations) and Jay Nelson of Towson University (local arrangements). I would like to extend a sincere 'thank you' to the many contributors who took the time to prepare a written submission for these proceedings. Your efforts are very much appreciated.

Don MacKinlay  
Congress Chair

## TABLE OF CONTENTS

Effect of seasonal patterns in energy allocation on natural mortality in lake-dwelling juvenile brown-trout ( <i>Salmo trutta</i> ) with respect to prey utilization. <i>Niva, T.</i> .....	1
Interspecific interactions between salmonids: implications for nutrient enrichment. <i>Mookerji, N., A. Mazumder, Z. Weng, M.A. Rodriguez &amp; J.B. Rasmussen</i> .....	7
Interannual variability of the Laptev Sea anadromous Coregonid fishes growth rates and its relation to environmental factors. <i>Kuznetsova, E.N. &amp; V.V. Kuznetsov</i> .....	13
On approaches to assessment of carrying capacity of the North Pacific with respect to salmon (Oncorhynchus spp.). <i>Klovach, N.V. &amp; O.F. Gritsenko</i> .....	23
Trophic relations among planktophage fishes of the Pacific waters off the North Kuril Islands and Southeast Kamchatka. <i>Orlov, A.M.</i> .....	31
Some aspects of trophic relations among predatory fishes of the Pacific waters off the North Kurils and Southeast Kamchatka. <i>Orlov, A.M.</i> .....	41
Succession of ichthyocenosis in a lateral channel at Dubrava Dam in Croatia. <i>Mustafic, P., M. Mrakovcic, S. Misetic, M. Kerovec &amp; D. Schneider</i> .....	53
A preliminary model of shoaling behavior based on visual field overlap patterns. <i>Rountree, R.A. &amp; G.R. Sedberry</i> .....	57

Amino acid metabolism in fish: predator protein metabolism driven by prey proteins. <i>Houlihan, D.F., &amp; L.Conceicao</i> .....	61
Distribution of chitinase in gastrointestinal tissues of eight fish species. <i>Moe, C.M. &amp; A.R. Place</i> .....	63
Effects of dietary digestive enzymes and hormones on growth and digestive tract enzyme activity of yellow perch ( <i>Perca flavescens</i> ). <i>Yackey, C., S. Czesny, S. Kolkovski &amp; Konrad Dabrowski</i> .....	67
Varying resistance of zooplankton prey species to digestion: implications on the diet estimates of fish larvae. <i>Sutela, T. &amp; A. Huusko</i> .....	71
Fishes of the genus <i>Morone</i> exhibit different intestinal absorption rates for proline as measured in vitro. <i>Lund, E.D., R. Harrell &amp; A.R. Place</i> .....	77
Carotenoids in muscle tissue indicate origin of wild juvenile trout ( <i>Salmo trutta</i> L.) <i>Noack, P.T., L.M. Laird &amp; L.R. Noble</i> .....	81
Protein and fat synthesis in juvenile rainbow trout, effect of dietary protein and lipid availability. The use of 15N and 13C labelled stable isotope tracers. <i>Campbell, P.J., D.F. Houlihan &amp; M. Rennie</i> .....	83
Comparison of the amilohydrolytic activity in the gut of the neotropical teleost species Pacu and Tambaqui hybrid submitted to different contents of soluble carbohydrate. <i>Correa, C.F., P.M. Bidinotto &amp; G. Moraes</i> .....	87
The effect of ingredient composition and protein/energy ratio on protein, energy and dry matter digestibility in diets for rainbow trout ( <i>Oncorhynchus mykiss</i> ). <i>Green, J.A., E.L. Brannon &amp; R.W. Hardy</i> .....	101

Preferential incorporation of essential fatty acids in fish tissues during different developmental stages and as a function of dietary levels. <i>Harel, M. &amp; A.C. Place</i> .....	109
How different are carnivores and herbivores: digestive enzyme activity in four closely related prickleback fishes from a California rocky intertidal habitat. <i>Chan, A.S. &amp; M.H. Horn</i> .....	123
Persistence of maternally derived yolk carotenoids in larvae and first feeding alevins of anadromous and non anadromous trout( <i>Salmo</i> <i>trutta L.</i> ) under hatchery conditions. <i>Noack, P.T., L.M. Laird &amp; I.G. Priede</i> .....	129
